

Course List MSc Psychology and Mental Health (Cognitive Neuropsychology, Positive Psychology and Well-being) (2023-2024)

To be admitted to one of the tracks of **MSc Psychology and Mental Health**, a solid foundation in the following subjects is required:

- Core courses in Psychology
- Statistics and Research Methodology
- **Three** specific (major) courses in Psychology

A solid foundation in these subjects is important as Tilburg University is bound to national regulations regarding the learning objectives and outcomes of its psychology programs. We therefore ask you to fill in the **course list** below to provide us with information regarding your prior education in the abovementioned subject areas. You are asked to make a comparison between the courses you've previously done (in your bachelor and/or master) and the courses mentioned in the course list below.

Please note that:

- The courses you wrote down must be part of a degree that you either have obtained or will obtain before you start your Master's program at Tilburg University.
- The courses you added in the course list must also be listed on your transcript of records.
- For every course you listed in the course list, a course description needs to be available that describes the main content and topics covered during the course. You can obtain these course descriptions from the website or course catalogue of your university. You can upload all course descriptions in one upload in your application in Osiris.
- Our Admission Committee uses this course list as an **aid**; it facilitates (the efficiency of) the assessment procedure. Do not worry if you experience difficulties completing this course list; no rights can be derived from this course list. Fill in the list to your best abilities.
- If you did not, or will not, obtain a comparable course, leave that row empty.

Tips to complete this course list

- To know the exact course content of the courses we listed in the course list, you can use our [Tilburg University Course Catalogue](#) (we recommend using Google Chrome as your internet browser, click on EN button in the right top corner for English) and search for the course by using the course ID or name. These courses are taught in our BSc Psychology at Tilburg University.
- Courses from your own Bachelor's and/or Master's program may not have the exact same name as ours. Make sure to check the course content of your own Bachelor's and/or Master's (course

description, learning goals, literature used) and that of the courses we listed in the course list to make a good comparison.

- You may name several courses as comparable to a course from our list to cover the content, for instance if the content of our course is covered in several courses in your program.
- You may use a course from your previous studies more than once. However, keep in mind the course load. For example, it only makes sense if this course comprises a large amount of credits/ECTS (e.g., 10 – 20 ECTS per course). We ask you to try to have a comparable amount of ECTS in terms of study load as well when making a comparison. Also note that every single ECT is only counted once, so it cannot be counted double of multiple times.
- In the Netherlands we work with the ECTS credit system. It is possible that your university uses another credit system. To facilitate our assessment procedure, we ask you to convert your credits into ECTS – if possible. Here are some examples to help you:
 - You may use the [conversion table](#) (download from Surfdrive) from Tilburg University's Study Abroad & Exchange Office; if your university/country is not represented in this list you may:
 - Ask your own University if they have a conversion table available (e.g., the Study Abroad & Exchange Office or the Student Administration)
 - Make your own calculations: A Bachelor's program in the Netherlands takes 3 years and students must obtain 180 ECTS to receive their bachelor diploma. This means Dutch students are required to obtain 60 ECTS per year. If a Bachelor's program in your university takes 4 years and you must obtain 480 credits to receive a Bachelor's diploma, you must obtain (on average) 120 credits per year. Hence, 1 ECTS = 2 credits in your university.

Please upload the completed course list as a PDF file in "Osiris Aanmeld" as part of your application.

Foundation in all courses listed in the table below:

<i>Core Courses in Psychology</i>				
Course ID	Course name (ECTS)	Comparable Course (course name¹ and course ID²)	credits³	ECTS⁴
530038	Experimental Psychology (6)			
500185	Brain and Behavior (6)			
500214	Social Psychology (6)			

¹ Name of the course as listed on your transcript of records.

² If your university makes use of course ID's, list them as stated on your transcript of records.

³ If your university does not make use of the ECTS credit system, list the number of credits obtained for this course as stated on your transcript of records.

⁴ If your university makes use of the ECTS credit system, list the number of ECTS obtained for this course as stated on your transcript of records OR make a conversion of your local credits to ECTS credits.

560028	Developmental Psychology (6)			
550041	Psychology of Personality (5)			
421096	Psychopathology (5)			
500196	Psychological Assessment (6)			

Foundation in all courses listed in the table below:

Statistics and Research Methodology				
Course ID	Course name	Comparable Course (course name and course ID)	credits	ECTS
424529	Introduction to Research Methodology (5)			
424530	Introduction to Statistics (5)			
424528	Experimental Research Methods (5)			
424527	Correlational Research Methods (5)			
424526	Applied Methods and Statistics (6)			

Foundation in at least 3 courses from the overview below:

Specific (major) courses in Psychology				
Course ID	Course name	Comparable Course (course name and course ID)	credits	ECTS
550022	Introduction to Clinical Neuropsychology (6)			
540033	Cognitive Neuropsychology (6)			
423022	Neuropsychological Assessment (6)			
500193	Introduction to Forensic Psychology (6)			
500198	Risk Assessment (6)			
500187	Criminality, Cognition & Personality (6)			
500192	Emotions: Scientific and Clinical Aspects (6)			
550038	Personality Disorders (6)			
500194	Introduction to Treatment Methods (6)			
422094	Stress and Health (6)			
500199	Sexology (6)			
422092	Clinical Health Psychology in Medical Science (6)			
560026	Developmental Disorders (6)			
500190	Development of Personal Relationships (6)			
500191	Positive psychology and development (6)
